

# Event App

Event App.

- Event App is an application for creating and viewing HTML5,CSS3,JS,jQuery Events
- Event App should be list all Events that are available
- Event App should be list sessions of the each event
  - Each session should have below
    - Title
    - Author
    - Duration
    - Details
- Trainees should be able to vote each session based on their feedback post attending the session
  - Vote up
  - Vote down
- Option to create new Events
  - For each event create new sessions
- New Event creation should have the following meta data
  - Name
  - Date
  - Time
  - Address
  - City
  - PIN
- Implement necessary validations to while creating the new event
- Option to edit an event
- Use NodeJS as web server to get and post data to the web server
- For the sake of example we will use JSON files at the server to transmit the data between client and server instead implementing actual services.
- Apply necessary styling using the CSS3 backgrounds
- Apply jQuery templates to populate the repeated session information
- User jQuery events to where ever UI events are applicable
- Use delegate(using On feature of jQuery events) to handle the events on the newly added sessions
- Use html5 form elements on areas

New Event:
