## **1. Introduction**

This assignment will test your skills on HTML 5 local Storage concepts learnt in the class.

## **2. Objective**

Get the brief knowledge of HTML 5 local Storage.

## **3. Prerequisites**

You should have some text editor like –

- 1) Notepad
- 2) Notepad ++
- 3) Sublime
- 4) Or any text editor

And you should use html 5 version . only you have to include `<!DOCTYPE html>` for html page at the first line.

## **4. Associated Data Files**

There is no associated data files for this assignments.

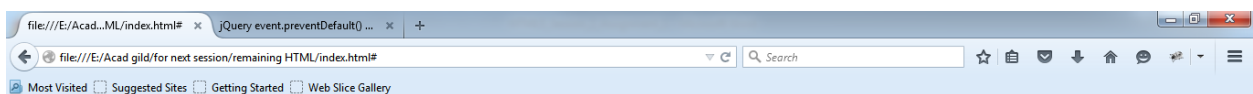

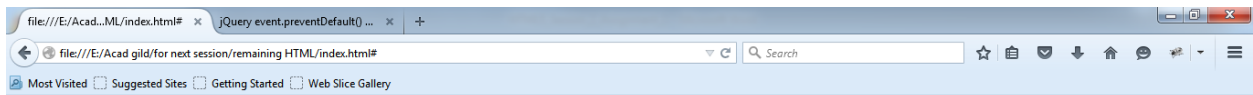

## **5. Problem Statement**

Create one html file ,

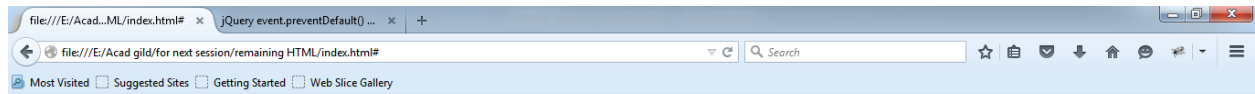

- 1) There will be one main page that hold login and signup button.
- 2) Once user will click one signup button , it will open signup module with this fields–  
name , email ,password
- 3) And then user can go back in main page . and user can try login with email and password . if email and password will correct than user will redirect to home page
- 4) If email and password is incorrect than it will show error message .
- 5) And in home page you have to show some message like – welcome to “username”.  
With logout button .

6) And once user will click on logout , user will redirect to main page
